**IER 20 - LPV Hurricane Protection Project - Mitigation:
Manchac Wildlife Management Area Shoreline Protection Modification,
St. John the Baptist Parish, LA**

Fact Sheet

CEMVN is proposing to complete mitigation efforts for the Lake Pontchartrain and Vicinity Hurricane Protection (LPV) Project at Manchac Wildlife Management Area (WMA). Changes in wetland elevation and the design of existing shoreline protection structures should prevent or slow further erosion of the shoreline at the Manchac WMA. CEMVN is proposing to modify the existing structures, and place fill material between them and the existing shoreline to create marsh. This would protect the shoreline and create habitat for wildlife.

The proposed action is a result of the CEMVN mitigation effort not being completed as mandated by and described in the LPV Final Supplement II to the Environmental Impact Statement (EIS).

Expected completion date of IER 20: September 2008

Updated 25 March 2008
