IER 20 – Lake Pontchartrain and Vicinity Hurricane Protection Project – Mitigation: Manchac Wildlife Management Area Shoreline Protection Modification, St. John the Baptist Parish

IER Duration: May 2007 to April 2008

CEMVN will complete mitigation efforts for the Lake Pontchartrain and Vicinity Hurricane Protection (LPV) Project at Manchac Wildlife Management Area (WMA). Changes in wetland elevation, and the design of shoreline protection structures currently in place should prevent or slow further erosion of the shoreline in the Manchac WMA. Material may be filled between the dikes and the existing shoreline to create habitat. The proposed action is a result of the CEMVN mitigation effort not being completed as mandated by and described in the LPV Final Supplement II to the EIS.
