

Alternatives

Area 1: Red lines are levees, white lines are floodwalls. Where there are levees, we will raise them and where there are floodwalls, we will remove them and build them back higher. Everything in this area will be done within existing ROW.

Area 2: This is an existing floodwall. There are 2 alternatives:

1) Replace the existing floodwall with a larger floodwall section within existing ROW.

2) Replace the existing floodwall with an earthen levee section that requires a ROW expansion to the protected side.

Area 3: This is an existing levee. There are 2 alternatives:

1) Relocate the interior drainage canal further to the protected side and raise the existing levee section. This requires an expansion of ROW to the protected side.

2) Replace the existing levee with a floodwall within the existing ROW.
